- TECADE keeps growing and captivating audiences worldwide

NEWSLETTER 2

In our desire to offer our clients the best service and the better quality on their projects, we have implemented a complete Quality, Health, Safety and Environment system and we evaluate and assess our processes critically in a continuous effort to generate improvements that reflect our customers' demands and expectations.

TECADE CORPORATE: NEW ACHIEVEMENTS

Lloyds (LRQA) CE marking for execution of steel structures and aluminium structures (UNE 1090) and the applicable standard for welding procedures (ISO 3834-2)

We have been assessed against internationally recognized standard: Lloyds (LRQA) CE marking for execution of steel structures and aluminium structures (UNE 1090) and the applicable standard for welding procedures (ISO 3834-2)!

Lloyds is a certification authority of internationally renowned and particular relevance with regard to our sector. It is a pleasure for Tecade having approved the certification process and we are really glad.

The achievement mentioned allows us to continue improving and to cope with the changing demands in their sector. We continue to grow and to strive for growth in an increasingly competitive world.

TECADE INTERNATIONAL

TECADE, expanding our horizons...

TECADE ALREADY HAS ITS DELEGATION IN MEXICO

In line with our strategic expansion, Tecade continues to expand around the world. We have just achieved a big step towards our full integration in Mexico.

A new society has been created between Tecade and SteelGo (50%-50%). SteelGo is a company which has a wealth of experience in the field of Construction and through that alliance we will achieve an important external projection.

We awarded 2,5€ million and if we all make an effort, we may guarantee a future of development and social and economic regeneration, crossing borders all around the world and showing the know-how of a Sevillian company.

Our projects at United Kingdom...

We're on the production process for Wikinger Jacket foundation Piles. We have just finished the construction of the first piles at Tecade Yard (Port of Seville). Those piles, having a weight of 350 TN, 65 meters length and 3,75 meter diameter underline the Tecade's capacity to undertake the most complex and ambitious projects in the offshore market.

Once the piles are built, they are ready for the last phase of the fabrication process which consists in the painting process of the depth marks. That brings it to the end of that item and then it will be ready to its loadout.

TECADE keeps growing and captivating audiences worldwide

The construction of the main section of the New Bridge for the St. Lawrence (Montreal-Canada) has been recently assigned to Tecade.

It represents the hard work of a large multi-skilled team and it is an achievement we are really proud of. We will continue working hard and being an asset for the society!
