## TECADE, continuously improving

### New construction processes and improvement of facilities: NEW BLASTING AND PAINTING BOOTH

Tecade has installed 2 new painting and blasting booths at our facilities in the Port of Seville (Tecade Yard). Our goal is to improve service to our client. In order to satisfy the growing demands for our products, we continue to increase our production capacity.

Tecade has now 4 enclosures fully operational all of which are available for simultaneous use to offer the best service possible and finishing required to the structures for our Offshore and Steel Bridges projects. Furthermore, we are currently working on the two painting workshop refurbishment belonging to the former shipyard.

### Improvement of machinery: A NEW CYLINDER has been acquired by Tecade

The workload coming from offshore industry undertaken by Tecade is requiring the need for expanding the capacity of sheet bending.

Tecade strives to continually improve and renew its services which has lead it to incorporate a new cylinder at its facilities at the Port of Seville, TECADE YARD.

This new acquisition has a higher rolling capacity: up to 222mm thickness and it can reach up to 4 meters ferrule long; benefiting us to improve our capacities and the possibility to cope with a challenging future.

- Thickness up to 222 mm
- Length up to 4 m
- Øint from 520 mm onwards

## TECADE continues to find their way to offshore industry

### JOHAN SVERDRUP PROJECT

Johan Sverdrup is one of the five largest oil fields on the Norwegian continental shelf. With expected resources of between 1.9—3.0 billion barrels of oil equivalents, it will also be one of the most important industrial projects in Norway in the next 50 years.

Tecade is pursuing its remarkable expansion and continues its strong performance through the award of contracts around the world.

We awarded the contract for two important work packages for Johan Sverdrup LQ oil rig in Norway.

The awarding of this contract is a new step forward to the company because it is the heaviest structure in the whole Jacket (with an amount of 2400Tn) which means, by implication, the opening up of new fields of activity, and the execution in greater scale of projects.

The project is associated to 40.000 working hours . It started last September and we will finish our contribution throughout the month of April.

## #WorkingBreakfast

Caring for our team is an important section of our company policy. Last month Tecade implemented a new internal action: a **departmental breakfast**. It consisted of a relaxed environment of meeting between colleagues over coffee and donuts.

The Corporate Social Responsibility is an integrated value inside our philosophy. Mutual Trust, Respect, Integrity and Solidarity are the values which guide Tecade actions. The main pillars to ensure success in one organization are the followings: our commitment to the professional and personal development of our employees, ensuring equality of opportunity, a fruitful dialogue between employers and workers, to guarantee that employees' and employers' rights will be respected and compliance with applicable laws, standards and regulations.

Our intention with this kind of actions is to promote a better working environment.
